

# MUHAMMAD ANS

Full-Stack Developer (Laravel | Nuxt | Vue.js)

ans2003@gmail.com | +92 323 4535756 | Lahore, Pakistan

linkedin.com/in/muhammadans | github.com/ans1

## Professional Summary

Full-stack developer with **10+ years of experience** delivering **Laravel** back-ends (REST APIs, Eloquent ORM, web services) and modern front-ends with **Nuxt.js** and **Vue.js**. Track record of leading small development teams, running code reviews, and shipping production systems across travel, real-estate, geospatial, academic and enterprise-administration domains. Comfortable owning a product end-to-end — architecture, UX/UI and implementation. Builds **production AI features** — natural-language search, structured extraction and embedding-backed retrieval — with the prompt hardening, caching and cost controls that real usage demands, and uses AI-assisted development to move from concept to production faster. Trusted for ownership, fast delivery, and effective collaboration with cross-functional stakeholders.

## Core Skills

|                  |                                                                                                                                                                                  |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Back-End         | PHP (8+), Laravel, REST APIs, Eloquent ORM, MySQL (8+), Sanctum, Spatie Permissions, Queues, AI Integration                                                                      |
| Front-End        | Nuxt 4, Vue 3, Nuxt UI v4, Inertia.js, Tailwind CSS, Pinia, SCSS, HTML5                                                                                                          |
| AI Engineering   | Laravel AI SDK, Gemini & Groq (with failover), structured / JSON-schema output, embeddings & pgvector semantic search, prompt design & injection hardening, AI cost control      |
| Specialised      | Multi-tenancy & RBAC, geospatial / OpenLayers & shapefiles, LaTeX & document pipelines, i18n (AR/EN, RTL)                                                                        |
| DevOps & Tooling | Linux / Ubuntu VPS deployment, Apache & PHP-FPM, Nginx, PM2 (Nuxt SSR), zero-downtime deploy scripting, SSH & server provisioning, Docker, Git & GitHub, Postman, Claude, Cursor |

## Experience

- Independent Full-Stack Developer (Contract)

Independent — Remote

Feb 2024 – Present

  - Led a five-person team building a collaborative web GIS platform; designed the spatial database and shape data model behind it, and built the shapefile ingestion, map rendering and feature-editing paths.
  - Built HR and finance modules for a multi-tenant back-office platform, then co-led its ground-up rewrite onto Vue 3 with an in-house library of 40+ UI components.
  - Independently designed and built Safareva, a multi-vertical travel marketplace, from market research through to production — including two production AI features: a natural-language package search and an AI package builder.
- Senior Full-Stack Developer

Crewlogix Technologies — Lahore, Pakistan

Jan 2023 – Feb 2024

  - Led end-to-end full-stack delivery of Laravel applications, designing and maintaining REST APIs consumed by web and mobile clients.
  - Built user-facing features with Nuxt.js / Vue.js, keeping releases stable through task planning, code reviews and team mentoring.
- Senior Full-Stack Developer

TechNation — Lahore, Pakistan

Feb 2020 – Feb 2023

  - Built and maintained Laravel web services and core business logic for multiple client-facing applications over a three-year engagement.
  - Delivered responsive front-ends with Nuxt.js / Vue.js, working directly with stakeholders from requirements through production release.
- Freelance Full-Stack Developer

Independent — Remote

Jun 2017 – Feb 2020

  - Delivered end-to-end web projects for independent clients, building Laravel back-ends and Vue.js front-ends across e-commerce, service and content platforms.
  - Managed the full project lifecycle — requirements, development, testing and deployment — across multiple concurrent engagements.
- Senior Web Developer

FaveThemes — Lahore, Pakistan

Nov 2015 – Jun 2017

  - Developed and enhanced ThemeForest real-estate themes (Houzez, Homey) in WordPress and PHP; built reusable UI components adopted across multiple premium theme releases.

**Emenac Inc. — Lahore, Pakistan**

- Implemented custom CMS features and e-booking flows in PHP, MySQL and JavaScript; maintained travel websites for reliability, performance and cross-browser compatibility.

**Selected Projects**

---

**Safareva** — solo build · 2026 – present · live at [safareva.com](https://safareva.com)

Laravel · Nuxt 4 · Nuxt UI v4 · Vue 3 · Tailwind CSS · REST API · Laravel AI SDK · Gemini · Groq · pgvector

A multi-vertical travel package marketplace where agencies list packages and travellers browse and enquire. Built the full stack — a Laravel REST API with a dedicated admin panel and a Nuxt 4 customer-facing front-end — architected around dynamic service types (Pilgrimage, Holidays and more), each with its own theme, navigation and categories, so new verticals can be added without code changes, plus agency onboarding and dashboards, multi-currency pricing and a CMS-driven page system. Built two AI features end-to-end on the Laravel AI SDK (Gemini with Groq failover): a **natural-language “vibe search”** that parses free-text queries such as “7-day Umrah in Ramadan for a family” into structured catalogue filters, using pgvector cosine similarity over taxonomy embeddings to shortlist prompt context so prompt size stays flat as the catalogue grows; and an **AI package builder** that extracts structured package data from pasted supplier text or generates a draft from a short brief, then applies it transactionally with server-side name resolution and per-field confidence and missing-field reporting. Hardened the prompts to treat supplier text as untrusted data rather than instructions, and bounded AI spend with response caching, rate limiting and graceful degradation to keyword search. Owned end-to-end: market research, complete UX/UI design, and the full implementation, with no dedicated designer on the project.

**GIS Cloud** — tech lead, team of 5 · 2024 – 2025 · private client system

Laravel · Inertia.js · Vue 3 · OpenLayers · MySQL spatial data · Shapefile ingestion · Spatie Permissions

A collaborative web GIS platform where teams upload, style, edit and share geospatial data directly in the browser. **Designed the database and data model for map shapes:** a layer metadata table plus a shapes table created per uploaded layer, its columns derived from that shapefile’s own attributes — so any shapefile imports without a fixed schema, and removing a layer cleans up its data with it. Built the import path that turns an uploaded shapefile into stored map features, the rendering path that draws those layers on an OpenLayers map with per-layer colour and opacity, and full create, edit and delete of individual shapes on the map, plus the layer-sharing model and a modules-and-roles permission system. Led a five-person team, authoring the bulk of the codebase and reviewing the rest through pull requests.

**Multi-Tenant Back-Office Platform** — core developer, then co-lead on the rewrite · 2024 · private client system

Laravel · Inertia.js · Vue 3 · Tailwind CSS · Radix Vue · Google API

A modular platform running several client organisations from a single Laravel codebase, each tenant with its own module set, branding and permission model. Worked across the HR and finance modules — employee records (employment history, documents, qualifications, bank and pension details), a safe-deposit-box register with transaction and summary reporting, and petty-cash tracking with printable reports — plus the modules-and-roles permission layer and national digital-ID single sign-on for government-linked tenants. Later co-led the ground-up rewrite onto Vue 3, building an in-house library of 40+ Radix-based UI components and adding a Gmail-integrated support desk and team-based tenancy.

**UQU Journals System** — full-stack developer · 2023 – 2024

Laravel · PHPWord · Pandoc · Vue 3 · Vite · CKEditor 5 · LaTeX · i18n (AR/EN, RTL)

A full-stack journal article publishing tool built for Umm Al-Qura University, Saudi Arabia. Built the Laravel API that parses uploaded Word documents (via PHPWord/Pandoc) into structured sections and compiles edited content into a publication-ready PDF through a custom LaTeX pipeline, alongside the Vue 3 front-end where users review and edit text, tables, images, references and nested subsections in a CKEditor-powered interface with drag-and-drop reordering. Delivered full Arabic/English localisation with RTL support.

**Additional Project Experience**

---

**Laravel / full-stack:** Kargenic (back-end & team leadership) · ScrapingHome (Laravel + Nuxt.js) · Lawyer Finder · Numbids · Adrenagy · Ethmad · Fraisebonbon

**WordPress / front-end:** Houzez & Homey (ThemeForest best-sellers) · Origami (led the WordPress team) · Wedosmarthoms

*Further web-services work: Sechoir, ADCycling, Cacao, Cars247, Fatimawithlove.*

**Education**

---

**BA** — University of the Punjab, Pakistan (c. 2014)

**Intermediate** — Lahore Board, Pakistan

**Matriculation** — Rawalpindi Board, Pakistan

**English Language** — A-Level
